

PLOS FORMATTING REQUESTS

For: "Sensory processing in humans and mice fluctuates between external and internal modes"

As a Latex submission, please provide the .TEX file for your manuscript along with an updated reference PDF marked up with the changes you have made. **Please ensure your final .TEX file does not contain marked changes as this is the file that will be used for typesetting. Please note that PLOS staff are not able to make formatting changes or edits to LaTeX files on your behalf. All changes must be made yourself; please ensure you update both the .tex file as well as the PDF.**

To access your manuscript and complete these changes, please follow the link in the email we sent you. You will find the submission in "Current Task Assignments", and will need to click "Submit Task" in order to upload your corrected file(s).

This is the FINAL stage for you to copyedit your manuscript and figure files. We strongly recommend that all authors double check ALL files prior to the final versions being submitted. Changes to the manuscript, statements, author list, references, equations, or figures, including resizing, at the proof stage WILL NOT BE ACCEPTED.

Questions? Email plosbiology@plos.org quoting your manuscript number.

METADATA CHECK

Please confirm that the following information is correct and contact us if any changes are necessary. This information will be indexed in PubMed and published by *PLOS Biology* as you have written them.

- ✓ An **Early Version** of your manuscript:
 - WILL be published online ahead of the final version

If you (or your institution) are planning a press release for this article, please contact us as soon as possible to ensure that an early version of your paper is not published.

- Your **financial disclosure** will be typeset as follows:
 - **To be confirmed. Please check the Manuscript Requirements below.**
 - **Here is our suggestion:**

- “VW was funded by the Leopoldina Academy of Sciences (grant number: LDPS2022-16, <https://www.leopoldina.org/en/leopoldina-home/>) and the German Research Foundation DFG (grant number: STE 1430/8-1, <https://www.dfg.de>)
 - VW and HS were funded by the Berlin Institute of Health Clinician Scientist Program (<https://www.bihealth.org/en/translation/innovation-enabler/academy/bih-charite-clinician-scientist-program>)
 - PS was funded by the German Research Foundation DFG (grant number: STE 1430/8-1, <https://www.dfg.de>) and the German Ministry for Research and Education (ERA-NET NEURON program, grant number: 01EW2007A, <https://www.neuron-eranet.eu/>).
 - The funders had no role in study design, data collection and analysis, decision to publish, or preparation of the manuscript.”
- ✓ Your **competing interests** statement will be typeset as follows:
- The authors have declared that no competing interests exist.
- ✓ Your **data availability statement** will be typeset as follows:
- The authors confirm that all data underlying the findings are fully available without restriction.
All materials associated with this submission are available on an accompanying Github repository (<https://github.com/veithweilnhammer/Modes>, DOI: <https://zenodo.org/records/10019948>). We included all relevant data and code for the generation of the manuscript in the R-Markdown® format. With this, we present a fully transparent and reproducible research approach to the reviewers and future readers of our manuscript.
 - This is fine. The last sentence is from our cover letter to the editors. I think it may be sufficient to say just that: “The authors confirm that all data underlying the findings are fully available without restriction. All materials associated with this submission are available on an accompanying Github repository (<https://github.com/veithweilnhammer/Modes>, DOI: <https://zenodo.org/records/10019948>). We included all relevant data and code for the generation of the manuscript in the R-Markdown® format.
- ✓ The details of the **corresponding author** will be typeset as follows:
- Name: Veith Weilnhammer
 - E-mail: veith.weilnhammer@gmail.com
 - ORCID: 0000-0002-3332-0006

- ✓ Please check the **authorship and affiliations** list on the title page of your manuscript. These details will be used to index the authorship of your manuscript and therefore should be checked carefully for any errors.
- ✓ Please ensure that if you have any protocols associated with protocols.io in your manuscript, they are made public before publication to guarantee immediate access to the methodological details.
- ✓ Your **title** will be typeset from the submission system, not the manuscript file. Please check that the following is correct:
 - Sensory processing in humans and mice fluctuates between external and internal modes
- ✓ Your **short title** will be typeset from the submission system, not the manuscript file. Please check that the following is correct:
 - Bimodal inference in humans and mice

Please note that if you wish any word in your submission's title or short title to be **italicised**, this will need to be manually changed in the Editorial Manager system. Please contact the journal office to address this.

Please pay special attention to your Supporting Information files, as these will be published as given. Make sure that all tracked changes, if present, have been accepted before submitting the final versions for publication.

MANUSCRIPT REQUIREMENTS

Please update your manuscript with the following changes:

1. Your current Financial Disclosure Statement states:

"VW was funded by the Leopoldina Academy of Sciences (grant number: LDPS2022-16, <https://www.leopoldina.org/en/leopoldina-home/>) and the German Research Foundation DFG (grant number: STE 1430/8-1, <https://www.dfg.de>).

VW and HS were funded by the Berlin Institute of Health Clinician Scientist Program (<https://www.bihealth.org/en/translation/innovation-enabler/academy/bih-charite-clinician-scientist-program>).

PS was funded by the German Research Foundation DFG (grant number: STE 1430/8-1, <https://www.dfg.de>) and the German Ministry for Research and Education (ERA-NET NEURON program, grant number: 01EW2007A, <https://www.neuron-eranet.eu/>).

The funders had no role in study design, data collection and analysis, decision to publish, or preparation of the manuscript.”

However the Funding Information states:

**Funding Information for
Manuscript Number: PBIOLOGY-D-23-01347R4
"Sensory processing in humans and mice fluctuates between
external and internal modes"**

Funder Name	Grant Number	Grant Recipient
Deutsche Forschungsgemeinschaft	BIH Clinician Scientist Program	Dr. med. Veith Andreas Weinhhammer Heiner Stuke
Deutsche Akademie der Naturforscher Leopoldina - Nationale Akademie der Wissenschaften	LPDS 2022-16	Dr. med. Veith Andreas Weinhhammer
ERANET NEURON	JTC2019	Philipp Sterzer

Please indicate by return email the full and correct funding information for your study and confirm the order in which they should appear. Please be sure to indicate whether the funders played any role in the study design, data collection and analysis, decision to publish, or preparation of the manuscript.

2. We note that you may not have used the PLOS LaTeX template. This is not required, but please be sure that you are familiar with our LaTeX guidelines to help reduce the chance of delay due to typesetting errors. Our guidelines can be found here:

<https://journals.plos.org/plosbiology/s/LaTeX>

3. We note that your .tex file does not include the reference information. Please ensure that all reference information is included within the .tex file rather than in a separate .bib or .bbl file

We include the reference information in the latex file. It starts at line 2108.

4. Please indicate the corresponding author on the title page with an asterisk (*) and include the corresponding author's email address. Only an asterisk and the email address itself are required.

Done

5. Please note that Affiliations should include a department (if applicable), an institution, a city, and a country (no postcode). US affiliations should also include the unabbreviated state name. For example: Department of Biomedical Engineering, Johns Hopkins University, Baltimore, Maryland, United States of America.

Done.

6. Please ensure that all author names are spelled correctly in the manuscript file and the submission form, including the use of a middle name/initials, and any special characters (accents, umlauts, etc.). Please place first/given names before last/family names. We noticed that author *Veith Weinhhammer is* is listed as *Veith Andreas Weinhhammer* in the submission form and ask that you ensure they match verbatim. Please be aware that correct spelling and formatting of author names in the article file is vital for accurate indexing in PubMed. If you need to amend the spelling in the submission form please let us know and we will do so on your behalf.

Could you be so kind to change the submission form to Veith Weinhhammer? My name is long enough as it is 😊.

7. We note that you have included the phrase “submitted” or “unpublished” in the S1 Table. Unfortunately, this does not meet our data sharing requirements. PLOS does not permit references to inaccessible data. We require that authors provide all relevant data within the paper, Supporting Information files, or in an acceptable, public repository. Please add a citation to support this phrase or upload the data that corresponds with these findings to a stable repository (such as Figshare or Dryad) and provide and URLs, DOIs, or accession numbers that may be used to access these data. Or, if the data are not a core part of the research being presented in your study, we ask that you remove the phrase that refers to these data.

All data are publicly available. S1 Table is a summary of the data collected in the Confidence database. Some of the data made available by the Confidence database have been published only as data, but not as a study (at least at the time of us accessing the database, this is meant in the table by “not published”). All data we used can be downloaded directly from the Confidence database (and our associated Github). We provide a detailed report on how to we accessed the data in the subsection “Experimental model and subject details” of the Methods.

8. All references in your reference list must be cited in the text. Currently reference [81] and [82] is not cited.

Citation 82 has only been used in our response to a comment by the reviewer. We have deleted this reference.

We have added citation 81 (which was so far only cited in S1 Supplemental Text) to the respective point in the manuscript (appearing first after citation [80] in the computational modeling subsection of the Methods).

9. Please ensure that all main figure files in the inventory follow PLOS figure naming conventions: the file name should be in the format "Fig#.filetype": for example, Fig1.tif or Fig1.eps.

In the inventory's Item Description field and in all in-text references, figures should be referred to as "Fig 1," Fig 2," "Fig 1A," etc.

Please note that PLOS does NOT allow the following formatting:

- Figure 1 or figure 1
- Fig. 1
- fig 1

Done.

10. Please ensure that all supporting information legend titles use the following format verbatim in all in-text citations (including spelling and capitalization): S1 Fig, S1 Table, S1 Text, S1 Data, S1A Fig etc. Each file type should be numbered starting at 1

Done.

You can also upload a Striking Image to accompany your article if one is available. If this image is judged to be suitable, it may be featured on our website. Images should be high resolution, eye-catching, single panel images. If your image is from someone other than yourself, please ensure that the artist has read and agreed to the terms and conditions of the [Creative Commons Attribution License](#).

Note: we cannot publish copyrighted images. When uploading a Striking Image, please also provide a document containing a suitable caption for the image, and appropriate credit to the image's creator. This document can be uploaded as a second 'Striking Image' file type.
